

Granstand® III Modular Standing System

Standing You The Way Nature Intended!

The GRANSTAND III MSS aligns the body in its natural standing position with a totally individualized fit. This is accomplished through the most extensive system of adjustable components available. Individual chest pad, tabletop, kneepad and footpad adjustments along with our various sling options assure the best standing position possible. The innovative design features of the Granstand III MSS allow the necessary adjustments to facilitate complete hip extension. This comfortable, personalized fit reduces stress at pressure points and supplies a proper weight bearing posture providing maximum weight bearing as well as contracture control.

COMPLETE HIP EXTENSION, CONTRACTURE CONTROL, PROGRESSIVE STANDING

The GRANSTAND III MSS, while supplying the most desirable standing positioning possible, allows for precise adjustments to facilitate a natural mild hyperextension of the hips. This provides the client with the best possible orthopedic alignment to maximize the positive outcomes of their standing program. The Granstand III MSS supplies the flexibility required for stretching and range-of-motion exercises while maintaining proper weight bearing even with severe contractures. All of these advanced positioning capabilities allow for a progressive standing program benefiting clients at all levels of need. From the most complex positioning needs to those clients who just want to diminish the risk of the many predictable secondary concerns from not standing, Granstand III MSS is the system of choice.

Growth Capable

Granstand III MSS / Kidstand III MSS is Growth Capable!

Unprecedented growth capability in one product - the Granstand III Modular Standing System is just that - *A System!* Granstand III MSS is designed to accommodate clients who require, from a very young age, equipment that can change and adapt as they grow and change. Our modular system allows for unsurpassed growth ability at a minimum of cost in both time and money. Most growth adjustments require only a few minutes and many of these changes require the purchase of little or no additional equipment. If the client's growth is accompanied by a change in physical condition, equipment upgrades can be added as needed without purchasing a new frame.

Both the Kidstand III and the Granstand III MSS utilize the same frame and components. They are configured as needed with some minor differences in the sizes of the positioning pads and minor frame components. Either unit can easily be converted from one configuration to the other quickly and inexpensively. These adaptable standing systems serve the widest range of clients possible and have the ability to continue to provide proper standing alignment for clients as they grow. Starting with one of these innovative modular systems eliminates the need to purchase 3 or 4 conventional standing devices. Unprecedented adaptability for growth or other changes in equipment needs is made possible through our built-in potential for numerous adjustments and easy upgrades. These innovative features, along with durable construction and multi-functional design, make the GRANSTAND III MSS the best economic value on the market.

Mike 6' tall in a Granstand III MSS

Nichole 42" tall in a Kidstand III MSS

SPACE SAVING EXPANDABLE FRAME

Our standard frame accommodates multiple chair styles while requiring minimal space. Our standard expandable base design allows for larger chairs and power chairs to fit within the unit without needing a wider frame. The narrow width of 27 1/2" fits through most standard doorways allowing for extra mobility and function in the home or wherever space is limited. The ability for the chair to fit within the frame keeps the room area required for use of the unit to a minimum unlike units that require extra space for the chair, the stander and, in many cases, a patient lift to be kept near the stander.

ADVANCED FOOT POSITIONING AND MOBILITY

Adding a Mobile Foot System allows the Granstand III MSS to be mobile while in use. These optional foot systems offer greater growth potential and height adjustment plus provide the ability to match the height of the wheelchair footplates for the best possible lifting position.

Height-Adjustable Foot System: Allows for Height and Depth adjustment plus Individual Width, Toe-In and Toe-Out adjustments.

Multi-Adjustable Foot System: Allows for Height and Depth adjustment plus Individual Width, Toe-In, Toe-Out, Planter-Flexion and Dorsi-Flexion adjustments.

Multi-Functional Frame

Supplying More Function For Less Cost

NO TRANSFER NO LIFTING DESIGN

Safe, No Transfer Design lifts you directly from your wheelchair or other seating surface eliminating the need for transferring in and out of the unit. Our easy-to-use *Pull-to-Place* sling eliminates transfers and can be placed without lifting the client.

Slide sling down behind the client, pull sling into place with the pull-to-place tabs.

Wheel into unit or roll it up to the client, place the feet and hook onto the lift arms.

Activate the hydraulic unit to begin the lift and raise the client to a standing position.

Granstand III MSS places the hips in proper position for full weight bearing.

LIFT AND TRANSFER SYSTEMS ALL IN ONE

Simply by adding one of our mobile foot systems, the Granstand III MSS becomes an easy to use patient lift / transfer device, as well as, a state of the art standing system. This easy-to-use feature assists in maintaining client posture and eliminates repositioning in the wheelchair after standing by seating the client with proper body mechanics while lowering them into their seat. Clients are lifted and transferred comfortably while standing eliminating the discomfort and disorientation that is common with overhead-style lifting devices. Our innovative frame allows this unit to fit under a bed or mat table permitting use as a lift / transfer device.

PROPER LIFT / TRANSFER TECHNIQUE

Granstand III MSS not only lifts you comfortably from your seat but returns you to a neutral seated posture easily and comfortably by nature of its innovative lifting design. When transferring into your seated product, you are returned to your chair with your body aligned and placed into a neutral position as the body is lowered gently into a natural seated posture. Being lowered from a standing position allows you to be fully positioned all the way into the back of your chair, eliminating further repositioning, lifting or pulling.

INDEPENDENT MOBILITY

Granstand III MSS with the mobile package supplies independent mobility during standing for clients with good upper body strength. Positive movement chain drive system supplies excellent maneuverability while standing, increasing independence for the standing client. With the mobile package the Granstand III MSS functions as an *Independently Operated Lift and Transfer Device* allowing the client to transfer themselves from one seated surface to another.

ADDITIONAL STANDING SYSTEM OPTIONS

Contoured Body Pad with Laterals & Padded Support Strap
Complete upper body support system supplies additional upper body support with anterior, side to side and posterior support.

Multi-Adj. Knee System
Offers individual adjustability for height and width of the lower extremities for maximum fitting capabilities.
