The Amputee Sling is a low height model with divided leg parts. It features a reinforced back and is suitable for patients with double-sided or single leg amputations as well as patients with hip problems. Because of the slightly recline position, it is also suitable for patients with an increased risk of sliding out of the sling. The user of this sling must have good head control. The Amputee sling is available in Polyester or Polyester Net fabrics and can be used with an optional belt for added security.
